From 100% manual work to 100% automation, there's a wide range of possibilities. And every point on that spectrum reflects a deeper choice:

- **How much do we respect human labor?**
- **How much responsibility do we take for quality?**
- **Are we putting people first—or machines first?**

HUMAN-IN-THE-LOOP

AUGMENTATION

(like post-editing) offers balance. Humans review, edit, approve.

is where AI actively assists humans during the task, adapting to their inputs.

100% AUTOMATION

100% MANUAL

often positioned as "efficiency," but can be a form of irresponsibility — to quality, to labor, to the values of the profession.

AUTOMATION SPECTRUM

may sound noble, but it can actually harm humanity by ignoring the value of people's time and creativity
